GHOST HORIZON

Long Wheelbase Edition

Bespoke Blueprint & Technical Manifesto

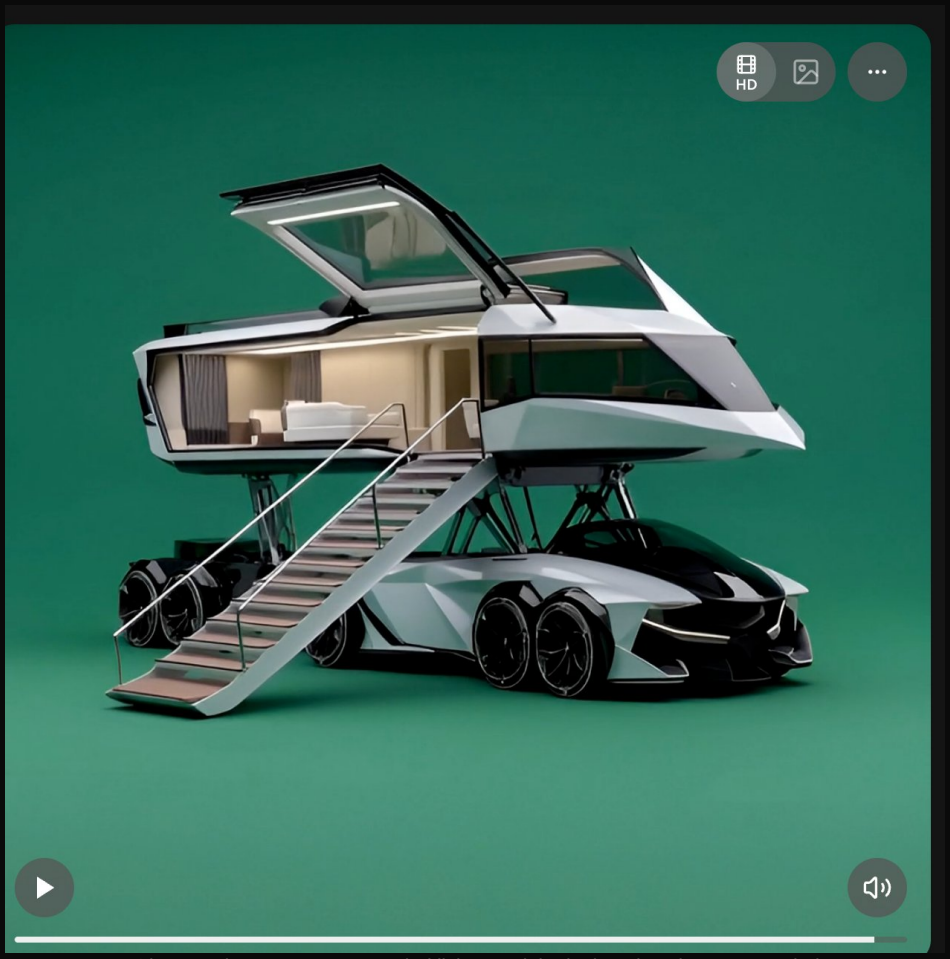
Ghost Horizon LWB — Desert terrain proving run, front three-quarter

A seven-month development programme has produced a vehicle that redefines what a land-based luxury command platform can be. The Ghost Horizon integrates ten M.G.G proprietary technologies as standard — no optional extras, no compromise.

Note: The Short Wheelbase variant (six-wheel configuration) is currently in parallel development.

Ghost Horizon LWB — Rear three-quarter, lounge cabin raised, desert terrain



Ghost Horizon LWB — Expanded living module deployed, staircase extended

I. DESIGN PHILOSOPHY

The Ghost Horizon is not an RV. It is not a motorhome. It is a sovereign command vehicle — a self-contained mobile estate built to the standards of a private aircraft interior, driven by supercar performance figures, and protected by military-grade surveillance architecture.

The defining visual innovation: the lounge cabin module raises hydraulically on the Ghost Spine lift system, enabling panoramic elevated viewing from any terrain — including shallow water deployment. The diGE finish (non-shiny, 35mm Analog Warmth, Milky Grain) ensures the vehicle reads as a work of moving sculpture rather than a commercial product.

II. INTERIOR — THE CRAFTSMAN STANDARD

Ghost Horizon cockpit — Walnut burl dash, quilted burgundy leather, analog gauges, Pulse Button integration

Ghost Horizon cockpit — Cream quilted leather variant, chrome detail, panoramic glass, dusk light

Every surface is hand-finished by craftsmen. Two interior palettes are available at specification: **Burgundy Burl** (deep walnut, garnet leather, chrome hardware) and **Cream Grain** (cream quilted leather, brushed aluminium, recessed lighting). Both feature diamond-stitched seating, analog instrument clusters, and a dedicated Pulse Button integration point in the centre console.

III. ARCHITECTURE & PERFORMANCE

PARAMETER	SPECIFICATION
Chassis	8,500 kg Monolithic Carbon Fibre Monocoque (Non-articulated)
Power Unit	2,800 BHP — Vulcanol / Sun-Fuel ready V12 Hybrid
Top Speed	230 MPH
0–60 MPH	6.0 Seconds
Efficiency	100 MPG (hybrid cycle)
Drivetrain	All-Wheel Steer + Ascending Mid-Axle
Wheels	Long Wheelbase: 8-wheel configuration
Cabin Lift	6-metre Ghost Spine hydraulic Spire
Water Capability	Shallow water deployment (cabin raised)

IV. VISION & DEFENSIVE SYSTEMS

- Laser Headlights — 600m range with 4K projection capability
- Smart-Glass HUD panels — integrated heads-up display across windscreen
- Ghost Signal — frequency intercept protocol (passive monitoring)
- Internal recovery winch + twin spare wheel bays (concealed)
- Crab-Walk positioning via all-wheel steer for tight terrain recovery

V. THE SIX PILLARS — FAMILY SOUL EMERGENCE

Ten M.G.G proprietary products are integrated as standard. The following six form the primary operational identity of the Ghost Horizon:

HAWKAI — The Scout
500-metre sky-mapping drone, permanently docked. Provides real-time suspension terrain data, security perimeter mapping, and sports/event aerial tracking.

The Pulse Button
Physical knurled chrome heart — the single high-stakes cockpit control point for system-wide commands. No touchscreen dependency for critical functions.

Dragon Chip Ghost AMP
35mm-standard analog audio depth for the cabin audio system. Proprietary signal processing delivers warmth unavailable in digital-only systems.

Ghost Roll-Flexi Screen
Standard 6m x 6m external rollable LED panel for cinema, live sports broadcast, nightclub graphics, or event deployment. Roof-mounted, remote-deployed.

Ghost Dictate
Zero-latency tactical voice interface. Accepts custom terminology and command vocabulary — no retraining to generic voice assistant language.

Ghost Watch
Primary wearable command unit. Controls Autoskin door/bay access, receives Sentry-360 alerts, and operates the Ghost Spine (Spire) lift remotely.

VI. SECURITY PROTOCOL — SENTRY-360 SURROUND

- Constant Surveillance: Life surround camera system — cannot be switched off
- 360-degree satellite-monitored filming of all exterior surroundings at all times
- Dragon Chip Ghost AMP technology underpins the satellite security link
- Active defence against vandalism or unauthorised interference
- Permanent satellite uplink — no signal dead zones in the standard specification

VII. M.G.G REMOTE COMMAND — APP & DEDICATED TABLET

Total operational control is maintained via the M.G.G App and a hardened dedicated tablet. Functions are grouped into three command modes:

MODE	FUNCTION	DETAIL
AUTOSKIN	Access Control	Remote doors, bays, Ghost Spine bicycle dock
TACTICAL	Dynamic Geometry	6m Spire lift, suspension height, Crab-Walk
ATMOSPHERE	Environment	Window tint (Charcoal Blackout), Laser Cinema, Roll-Flexi Screen, 35mm Grain scent

VIII. INVESTMENT INFRASTRUCTURE

COMPONENT	ESTIMATED VALUE
Base Chassis & Carbon Monocoque Body	£20M – £28M
V12 Hybrid Power Unit (Vulcanol/Sun-Fuel ready)	Included in base
Ten M.G.G Proprietary Technology Systems	Proprietary — not separately itemised
Craftsman Interior Build (per palette)	Commission-dependent
Ghost Spine / Spire Hydraulic System	Included in base
Sentry-360 Satellite Security Infrastructure	Included in base
Ghost Roll-Flexi Screen (6m x 6m)	Included in base
HAWKAI Scout Drone System	Included in base
Total Programme Estimate	**£20M – £28M+ (base configuration)**

IX. DEVELOPMENT STATUS & NEXT STEPS

- Seven-month design programme — complete. Design locked.
- Exterior renders: confirmed across desert terrain (front, rear, elevated cabin views)
- Interior palettes: Burgundy Burl & Cream Grain — both confirmed
- Ten M.G.G product integrations: specified and documented
- Short Wheelbase variant (6-wheel): in parallel development — separate blueprint to follow
- archive.org identifier: to be confirmed on upload
- Facebook announcement: published — archive.org document to follow immediately
